## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 3, 6, and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Sato et al (JP 2000-338674 in view of its English language translation).

Sato et al disclose a positive resist composition comprising a resin having the instantly claimed repeat units (1-10 on pages 35 and 36; in order a1, a2, and a3; in amounts meeting the instant claim limitations [0130]-[0132]), a solvent, an onium salt having a fluorinated alkyl anion, and preferably comprises a nitrogen containing base compound in an amount falling within the scope of the instant claim 7.

3. Claims 1-3 and 6 are rejected under 35 U.S.C. 102(e) as being anticipated by Kodama et al (6,749,987).

Kodama et al discloses a positive resist composition comprising a hydroxyl or acetoxy styrene resin (claim 2); and a resin comprising monomeric units meeting the limitations of a1-a4 in amounts meeting the instant claim limitations (see polymer 19 in table 5), a nitrogen

containing basic compound (see examples in column 125) and an onium salt compound having a fluorinated alkyl anion.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 4 and 5 rejected under 35 U.S.C. 103(a) as being unpatentable over Kodama et al.

Kodama et al has been discussed above and further teaches that additional cyclic group containing monomers may be employed (see b44 or b65 in table 5) and when a tetrapolymer is employed, the amounts appear to fall within the instant claim limitations. It would have been obvious to one of ordinary skill in the art to prepare the material of the reference choosing to employ an additional cyclic monomer meeting which would meet the limitations of the instant a4.

***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Fujimori et al (6,692,84) and Kodama (6,808,862) are cited for their teachings of similar materials.
